The present invention relates to virulence getrom pasteurellaceae. The present sequence is one such virulence gene. The present sequence is one such virulence gene. The present sequence an inactive gene may in turn be used to produce a vaccine, the inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The

The MDP1 protein can be used diagnosis and treatment of diseases involving pathogenic acid-fast bacteria, such as tuberculosis, Mycobacterium avium intracellular complex (MAC) and Hansen's disease.

The enzyme is obtained by adding amino acid residues to the N-terminus of cholesterol oxidase derived from Streptomyces sp. SA-COO, which shows the same activity as that of the naturally occuring enzyme, but has higher thermostability. Cholesterol oxidase DNA sequences derived from Streptomyces sp. are given in AAQ70417-18.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cholesterol oxidase is used for measurement of cholesterol which is an index for the diagnosis of endocrine diseases and abnormal metabolism. The enzyme is obtained by addiseases and residues to the N-terminus of cholesterol oxidase derived from Streptomyces sp. SA-COO, which shows the same activity as that of the naturally occurring enzyme, but has higher thermostability. Cholesterol

```

This sequence encodes wild type cholesterol oxidase. cholesterol oxidases may be prepared by mutation of

Modified

sequence. Mutant cholesterol oxidases pref. have amino acid substitutions at positions 103Ser, 121Val, 135Arg and/or 145Val (see also AAW08931-36). The modified enzymes have higher thermal stability than the parent enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The present invention describes cells originating in bone marrow or CC umbilical blood cells which are capable of differentiating into CC cardiomyocytes. Also described are: (1) cardiomyocytes produced by the CC differentiation of the cells; (2) a method for carrying out the CC differentiation into cardiomyocytes, regulated by a promotional and/or CC inhibitory factor; (3) a method for the differentiation of the cells CC into cell types other than cardiomyocytes; (4) drug compositions CC promoting the formation of heart muscle and regeneration of heart tissue CC which recognise the cells; (5) a method for the production of antibodies which recognise the cells; (6) a method for screening factors which recognise the cells; (6) a method for screening factors which contain the cells; (6) a method for screening factors which contain the proliferation of the cells; (7) a method for immortalising the cells by expressing telomerase in them; (8) drug compositions for CC the treatment of heart disease which contain the immortalising CC the treatment of diseases which contain the immortalised cells; and CC promoting their differentiation into cardiomyocytes. The cells are used in the treatment of diseases involving heart muscle degeneration, such CC as mycoardial infarction and in the study of cardiomyocyte composition. Analysis to Analysis to Analysis represent SCC sequences used in the exemplification of the present invention.

                                                                                                                                                     The present invention provides cells originating in the human bone me or umbilical blood cells which are capable of differentiating into cardiomyocytes. These cells are useful in the treatment of diseases involving heart muscle degeneration, such as myocardial infarction, at the study of cardiomyocyte differentiation. The present sequence is an oligonucleotide described in the exemplification of the invention.

APPLICANT: Armentrout, Richard W
APPLICANT: Armentrout, Richard W
TITLE OF INVENTION: Production of Xanthan Gum by Sphingomonas Bacteria
TITLE OF INVENTION: Carrying Genes from Xanthomonas Campestris
FILE REFERENCE: seq list for appl filed from pro. appl
CURRENT APPLICATION NUMBER: US/09/096,867
CURRENT FILING DATE: 1998-06-11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 106
                                                                                                                                                                                                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    xhoi; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Stratagene) in the ECORI (5') and XhoI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with EXASSIST (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note="vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhOI; This library, constructed by John Davies and Jeffrey McDermott, combines cDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda SAP II (Stratagene) in the EcoRI (5') and XhOI (3') sites. pBluescript II SK plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chauser@duke.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    greenhouse. Whole spike with awas trimmed, white, green and yellow anther were collected and total RNA, and poly(A) RNA were prepared, a cDNA library was made, and the CDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
